WIRE WRAPPING AND UNWRAPPING

Wire wrapping is a method of making a wire connection by coiling the bare wire around the sharp corners of a terminal under mechanical tension, providing a high reliability connection that is also easily removed to correct or modify a wiring layout.

The PTX series wire wrapping tools from OK Industries feature a lightweight, well-balanced construction, dual finger short-throw trigger and a long handle to mitigate pressure on the palm. These features help prevent repetitive stresses and result in an industry-leading design from a comfort and safety standpoint. Plains and battery powered versions are available.

Supplied with a European style plug.

A 230V PTX Power Tool

B PTX Battery Tool, PTX-BCI-UK Charger & 2 PTX-B Batteries
