load bearing ability, and removing the expense and environmental impact of taking it to landfill. Perma-soil is quick and efficient to use on site and contains a red traceable agent ensuring consistent mixing.

Perfect for use with small utility excavations, backfilling poles, water metres and toby boxes, it's ideal as a ground stabilising material. UltraCrete Perma-soil meets the requirements of the Utility WRAP Agreement and SMF & SMR of Appendix A9. Most importantly it saves contractors time, money & waste.

Appendix A9 approved, Perma-Soil reduces the need for virgin aggregates and can be re-excavated.

Features

- Time saving: quick and easy to use in-situ
- Cost saving: no need to purchase expensive backfill material
- Increases load bearing ability of excavated soil
- Contains a red traceable agent to ensure consistent mixing
- Meets the requirements of the Utility WRAP Agreement and SMF & SMR of Appendix A9
- Environmentally friendly: huge reduction in the amount of materials that would traditionally be sent to the landfill
- Supplied on a pallet of 56 x 25kg bags

Use in conjunction with Instarmac UltraCrete's HAPAS approved S00-4012 Instant Road Repair 6mm cold lay asphalt, SCJ Seal and Tack Coat spray and S00-4014 Instaband ECO Thermoplastic Overbanding Tape for a complete reinstatement system which can saving vital time and money.
