

Hyundai 2800psi Petrol Pressure Washer

Product Images

Product Code: P57-4323

Short Description

The Hyundai HYW3000P2 Petrol Pressure Washer is powered by the Hyundai 210cc 4-stroke high torque, Euro V low emissions recoil start petrol engine, which is engineered to handle your toughest cleaning jobs with ease.

Easy And Effective Jet Washer

The HYW3000P2 delivers 2800psi pressure and a flow rate of 8.75L/min from its triple stainless steel pistons high-pressure pump, for quick, easy and effective cleaning of driveways, patios, vehicles, windows and other demanding jobs where a high power washer is needed.

Water Supply Options

This petrol power pressure washer can be connected to the mains water supply via a garden hose with quick release 'Hozelock' type connector or can be gravity fed from a water tank.

To aid priming when drawing water from a tank with a suction hose:

Ensure that the Suction hose is 100% sealed against air leaks – any air is drawn into the suction side of the pump will prevent the machine from priming.

Connect the pressure washer to a mains water supply and run for 1 minute to free up any sticking valves.

Position the pressure washer as close to the water supply as possible

On startup, to aid priming, prime the pump before connecting a high-pressure hose to the pump outlet.

No Oil Changes

The Hyundai HYW3000P2 Petrol Pressure Washer's pump is sealed for life, so requires no pump oil changes.

Due to the nature of axial pressure washer pumps, these models are ideal for heavy-duty home use

(domestic applications), but for commercial use, you should consider a pressure washer with a triplex style pump.

User-Friendly Jet Washer

The Hyundai 210cc 4 stroke petrol engine has tremendous mid-range torque so the jet washer does not have to be operated at maximum revs while cleaning. This makes for a more pleasant, quieter user experience and reduces fuel consumption, whilst promoting long engine life.

Smart Features

The engine should be filled with 600ml of SAE30 or 15w40 engine oil. To protect against low engine oil level there is an engine cut out switch which operates if the engine oil is too low.

Easy Start Power Washer

The user-friendly easy pull start engine makes jobs where no electricity is available incredibly convenient, and it's also fitted with tough puncture-proof tyres which makes this a truly portable pressure washer.

Compact Design

The tubular steel frame with a soft grip handle can be moved to cover the washer for reduced storage space and reduces the likelihood of damage when in transit while anti-vibration feet provide all-round protection and stability.

Easy To Use

The pressure washer's trigger gun & lance rest provide easy reach whilst the built-in nozzle holder adds convenience.

Nozzles Included

The 4 quick connect nozzles (0°, 15°, 40° and standard low-pressure detergent spray nozzle) can be changed quickly and effortlessly by sliding the outer collar back on the Q/R connector on the lance.

Pressure Washer with Built-In Detergent Tank

The built-in 3-litre soap tank allows a cleaning solution or traffic film remover to be added for an ultimate deep clean power wash when required. Always follow manufacturer directions and dilute the mixture to the required strength.

In The Box:

Hyundai HYW3000P2 petrol pressure washer, 4 Quick Release Nozzles, Trigger Gun, Jet Wash Lance, 7.5m (25') High-pressure hose & User Manual.

Additional Accessories for HYW3000P2 Petrol Pressure Washer

Additional accessories are compatible and available, including a snow foam lance which provides complete foam coverage of a vehicle and loosens the dirt on the exterior prior to power washing and rotary patio cleaners.

Warranty

<https://www.millsLtd.com/default/hyundai-2800psi-petrol-pressure-washer.html>

19/04/2024

Covered by Hyundai 3 year platinum warranty.
