# Microduct Straight Connector

## 18mm Pack of 10

Product Images

Product Code: Q69-4310

---

## Short Description

---

Straight connector provides a suitable but simple and effective tube to tube joint and seal when the fittings are pushed onto a clean-cut tube end.

The tubes internal diameter are maintained throughout the product to allow a fibre bundle to be blown through the fitting.

The push fittings are suitable for the FibreFlow systems in sizes to match the tube diameters. If the tube is pulled away from the connector, internal teeth and a tapered body ensure the tube is gripped tighter.

Removal of the tube is easily achieved by pressing the collet inwards.

Body: Acetal copolymer, polycarbonate and sulphone, impact resistant; some are transparent.

O-Rings: nitrile rubber & EPDM

Collet: acetal copolymer, stainless steel teeth
