

Hyundai 20kW Diesel/Kerosene Space Heater 70,000BTU

Product Images

Product Code: P57-4326

Short Description

The 70,000 BTU/hr HY70DKH industrial space heater from Hyundai is the perfect choice for heating your

smaller-sized garage, factory or workshop. Be prepared for the colder months with this Hyundai Diesel Space Heater.

With an impressive output of 20kw/70,000BTU, this air heater has an approximate heating area of 496m³, distributing the heat quickly and evenly and keeping you warm regardless of the weather outside.

Key Features

70,000 BTU / 20kW space heater: Ideal for heating smaller garages, factories and workshops

Distributes heat quickly and evenly: Has approx heating area of 496m³

Low fuel consumption: Cost-effective heating solution for large areas

Simple to use: Easily adjust the desired temperature using the thermostat

Large fuel tank: One full tank gives approximately 10 hours of heat

Peace of mind: 2 year Hyundai warr

Suitable For Industrial Use

Ideal for placement in the open and semi-open, this heater is the best choice for industrial environments, including agriculture and automotive.

Cost-Effective Heating Solution

This forced air heater, which runs on either diesel or kerosene, can be classed as one of the most cost-effective ways to heat large areas.

With an impressive average fuel consumption of only 1.9L/hour, this efficient space heater will keep you warm whatever the weather, with a tank capacity that will last for approximately 10 hours of operation.

Easy To Use

Simply fill/top up the easy-to-access fuel tank, plug the heater into a standard UK socket, (13 Amp UK plug already fitted), turn the thermostat to the required temperature and switch to the 'on' position. The temperature of this compact space heater is easily adjustable using the thermostat knob located on the side of the heater. The heater will shut down when the desired temperature is reached and restart when the temperature drops.

Easy To Transport

Fitted with a thick carry handle, this diesel space heater can be easily moved from area to area with ease.

Just like any space heater, our HY70DKH requires a little room to be left around it for safety, especially due to the quality way it projects heat into a room or area. Ideally, try to leave around 8ft from the outlet, and 4ft around the sides and top. Don't forget to place it on a suitable surface!

Simple To Set Up

Minimal assembly required; just attach the top handle with two screws and fill with diesel, plug in and

set the thermostat to desired temperature.

Peace of Mind

Offering great value for money, these powerful diesel air heaters are built to last and come with a 2 year warranty* for your peace of mind.

What is 'BTU'?

BTU, or, British Thermal Unit is a measure of energy - an alternative measurement to joules. The very basic way to think of a BTU is that 1 BTU is the equivalent of burning a normal-sized wooden match all the way from one end to the other.

The exact measurement of a British Thermal Unit is the amount of heat that it takes to heat one pound (approx one pint) of water by one degree and is measured at the amount of energy to make the 1lb of water heat from 39 degrees Fahrenheit up to 40. (It can take slightly more or less energy to heat water by one-degree Fahrenheit depending upon the starting temperature).

At A Glance

70,000 BTU/hr (20kW) output
496m³ approximate heating area
Suitable for approx 10hrs of operation
Easy-to-read fuel and pressure gauges
Runs on diesel (red or white) or kerosene fuel
Perfect choice for industrial environments, including agriculture and automotive
UK-based after sales and parts
2 year limited warranty*

Specifications

Model HY70DKH
Net Weight (kg) 12.9
Heat Output 20kW or 70,000BTU/hr
Fuel Consumption 1.9L/hr
Fuel Tank Capacity (L) 19
Fuel Type Diesel or Kerosene
Max Outlet Air Temperature 393°C
Power Supply 230v
Warranty 2 Years
