

Heightec B05 Kari 5 Transport Bag - 5L WLL 5kg

Product Images

Product Code: S83-1072

Short Description

Personal kit & tool bag for attaching to harness belt. KARI range of durable, tough, waterproof kit bags

for storage and hauling.

Heightec's adaptable KARI 5 transport bag has 5 L capacity and features secure, roll top closure. The new style has stronger seams which have been RF welded for enhanced strength and the reinforced cylindrical base offers exceptional durability. The roll top can be rolled outwards to hold the bag open when working.

The hard wearing, waterproof construction makes it an ideal kit and rope bag and ensures the integrity of the equipment inside is not compromised. The design and construction safeguards the bag for a long working life even in harsh or aggressive environments.

2 D-rings either side of each closing buckle allow the bag to be 'locked' with a cable tie or tamper evident tag. Attachment D-rings are large enough to accommodate a karabiner so that the bag can be attached to the harness via gear loops or directly around the belt.

The KARI 5 transport bag can also be tamper tagged for individual use of personal or rescue equipment and is rated for lifting up to 5 kg. Working load limit, rated for lifting with 7:1 factor of safety.

The external daisy chain is rated at 5 kg and provides further storage for user.

Meets requirements of IPX7 (accidental immersion in water).
