

Sumitomo FC-6R+ High Precision Benchtop Cleaver

Product Images

Product Code: FC-6R+CLEAVER

Short Description

The FC-6+ adds 'one action' operation to the FC-6's traditional robustness and high-quality cleaving,

enhancing user productivity.

Accurate performance

The FC-6+ series incorporates selected materials and refined mechanical designs based on the preceding industry-standard models. The FC-6+ series further ensures accurate cleaver performance in any work environment.

One action cleaving

The simple, one-action cleaver maximizes work efficiency: once the fiber is cleaved, the carriage and the off-cut collector automatically return to their original positions seamlessly. It is no longer necessary to manually reset the blade and cut-off collector before each cleave.

Auto-rotating blade*1

The patented*2 auto-rotating blade system keeps a sharp blade edge ready for stable cleaving, eliminating the need for downtime for manual blade adjustment. The blade rotating action does not require batteries. It is a robust and fully mechanical system suitable for reliable field use.

Long-life blade

Genuine cleaver blades are crafted by Sumitomo Electric in Japan. Sumitomo Electric is a global leader in the production of hard metal cutting tool tips and blades. Genuine Sumitomo Electric cleaver blades are robust and long-lasting, with a life of 60,000*3 cleaves.

New secure product label

New holographic technology has been applied to the label on the top of the cleaver. This helps the user recognize a genuine Sumitomo Electric product, eliminating confusion with counterfeits.

Please see specification sheet for further details

Description
