Product Images

Product Code: E00-5753

Short Description

OPT Blown Fibre Droptube Copper Hybrid Cable Web Separator. Designed specifically to separate the

web joining a 6mm x 2.7mm Blown Fibre Overhead Droptube to a cable consisting of 2 x 0.4mm twisted pair copper conductors in a 'figure of eight' construction.

Description

OPT Blown Fibre Droptube Copper Hybrid Cable Web Separator. Designed specifically to separate the web joining a 6mm x 2.7mm Blown Fibre Overhead Drop Wire to a cable consisting of 2 x 0.4mm twisted pair copper conductors in a 'figure of eight' construction.

The tool separates the web joining the Blown Fibre Droptube (BFD) and copper element (containing a twisted pair) enabling the individual components to be terminated at both distribution pole and the customer's premises

The interchangeable anodised tool cassettes and covers (label coloured blue for this variant) are attached to a universal handle mechanism. The handle locking mechanism ensures the tool remains closed during the sheath slitting operation. A wrist strap and user instructions are supplied with each tool.

Dimensions 210 x 67 x 34mm
