Product Code: 103-10413

Short Description

Fremco Mini Blowing Junction Block for Manual Blowing 7-10 mm Microduct

Description

The mini blowing junction block is used as a junction when blowing fibre in two directions, and there is a loop left because the regular blowing machine does not fit into the manhole/excavation making it the perfect accessory for a MiniFlow Rapid.

The mini blowing junction block can also be used to blow a cable (by hand in short distances) from a narrow spot where there is no room for a regular blowing machine.

It's made from surface treated aluminium and can withstand the same air pressure as the MiniFlow Rapid and uses the same type of cable seals.
