

# Sticklers CleanClicker Male MT Fibre Cleaner Cassette

Product Images

Product Code: C05-4591

## Short Description

---

CleanClicker™ fibre cleaner cassette specifically adapted to clean 500+ male MT ferrules end faces

## Description

---

This male MPO fibre cleaner cassette is an important enhancement for companies using MPO connectors. This device has been specifically adapted to clean the male MT ferrules end faces; that is, cleaning the end faces between the alignment pins.

This handy tool will deliver faster, better, less expensive fibre cleaning: a simple, low-cost, high-quality cassette cleaner.

### Features

A narrower back-plate enables the alignment pins to “straddle” the cleaning ribbon and the back-plate, so the pins don't prevent the cleaning ribbon from scrubbing the fibre end faces

This is a simpler and intuitive design, which reduces costs

Features micro-woven cleaning ribbon with excellent dust trapping and residue absorption

Easily allows techs to clean multiple end-faces before advancing the wipe, saving money 500+ cleanings per tool

Enables wet-dry cleaning, for the best results Compact size easily fits into any operator's hand

No surprises translucent housing makes it easy to see the remaining quantity of cleaning ribbon

Generally lowers the cost-per-clean 50-80%

Color coded for easy discrimination; this tool has a pink label

This tool has a different, narrower back-plate beneath the cleaning ribbon. This plate and the ribbon is slightly narrower than the distance between the MPO guide pins. This allows the guide pins to straddle the cleaning ribbon. The narrow back-plate means operators can apply the proper amount of pressure and cleaning force on to the fiber end faces during the wipe process. This pressure and improved cleaning is not possible without the modified back-plate and results in enhanced cleaning results.

The cassette will provide users with least 500 clean end faces.

This is simply a better mousetrap for companies relying on MPO connectivity. It also cleans simplex SC, FC, ST, LC connectors, plus unmated jumper assemblies and the already-mentioned male MPO fibre assemblies. It is optimized for carrier networks and is ideal for OSP and premises applications, enterprise applications, field installation kits, OEM assembly and even research labs. Contains about 500+ cleanings.
