

Vivax-Metrotech vScan VM-550FF Transmitter

Product Images

Product Code: C00-1507

Short Description

The vScan transmitter generates a 33kHz signal which can be inducted onto a cable or connected directly with Direct Connection Leads.

Description

Configurable item. Please contact sales for details

The vScan Transmitter works hand in hand with the Vivax-Metrotech vScan Receiver. It generates a 33kHz signal which can be inducted onto a cable or connected directly with Direct Connection Leads.

The vScan Transmitter is perfect for use where cables are faulty or not giving off enough signal of their own. This transmitter will generate its own signal for you to then locate with a CAT like the vScan Receiver, or a precision Cable Locator like the vLoc Pro 2.

When using the direct connection output - The transmitter produces a full 1W output and transmits 33kHz & 131kHz simultaneously, the signal can be applied by direct connection, induction 33kHz or an inductive clamp (optional – 50mm – 100mm and 125mm diameter).
