

Mills Fibre Blowing Subduct Lubricant 3.8 Litre

Product Images

Product Code: S27-1961

Short Description

A specialist cable blowing lubricant for general fibre blowing applications as well as subduct relining. The Mills Fibre Blowing Subduct Lubricant massively reduces frictional drag during the blowing of fibre optical cable into the duct whilst increases the length of cable that can be blown.

This cable blowing lubricant is a water based white liquid that is non-flammable, non-toxic and substantially biodegradable. In addition the lube dries slowly to form a thin friction reducing film which retains its slip allowing additional cable installs or removals from the same duct at a later date.

Supplied in a 3.8 Litre container. This size container is ideal for refilling the smaller 0.95 litre resealable container (S27-1960)
