

# RIVETER 1A

## S83-0954

This riveting tool is hand operated and similar to a G-clamp, with a spigot spindle which screws down onto a locating pin or anvil.

It is used to install a rivet and a connector when fitting Kit 267A which provides electrical continuity of the moisture barrier across the joint of PE sheathed cables.

By placing the head of the rivet with a washer on the spigot, and placing a connector with the spikes facing upwards onto the anvil, the spindle can be screwed downwards onto the cable sheath to make a firm mechanical and electrical connection.
