

System Design Criteria Acknowledgement Form

25 YEAR LIMITED COMPONENT WARRANTY

The undersigned warrants that the following design guidelines and installation criteria will be followed to optimize the performance of a Category rated horizontal network link/channel, and to qualify for Fusion warranty and applications assurance.

- The design and installation of UTP for workstation segments shall comply with all applicable sections of ISO/IEC11801
- The design and installation of UTP backbone segments shall comply with all applicable sections of ISO/IEC11801
- All connecting hardware, enclosures, and patching components shall be Fusion brand.
- All cabling products shall be Fusion brand.
- Cabling distances shall not exceed the limits outlined in ISO/IEC11801.
- Test results for each UTP cable to be warranted shall be submitted prior to issuing warranty certificate.
- Fusion reserves the right to field inspect the installation of all segments prior to final certification.
- All requirements listed above shall be met prior to the final certification and issuance of warranty certificate.
- ISO/IEC11801 shall be used as a guideline in field-testing.
- The Fusion Installer certifies that the installation has been designed in accordance with and ISO/IEC11801 recommended installation methods, with approved components, and complies with the performance requirements of ISO/IEC11801
